

BladeLogic Compliance Manager

Learn BladeLogic from BladeLogic

Course Description

This course is for anyone who needs to demonstrate compliance with company or government policies. You will use the BladeLogic Configuration Manager console to audit multiple servers and applications for compliance with company or government policies, create Snapshots to store important server assets for use in auditing, analyze servers for patch compliance, add rules to an existing component to enable testing for compliance, create compliance jobs to audit server assets, load and use BladeLogic CIS content, work with compliance exceptions, and use the BladeLogic Reporting Tool to generate audit and compliance related reports.

Who Should Attend

Application development, QA, and packaging and promotion staff
Platform, application support, network, helpdesk, and NOC operations teams
Server and network security and compliance engineers

Duration

1 Day

Format

Instructor-led lectures and hands-on lab sessions. Students receive personal guidance from expert instructors and hands-on lab exercises allow hands-on application of course concepts.

Locations

Public courses take place worldwide, giving customers across the globe easy access to the latest BladeLogic technology information and hands-on training, schedule at www.bladelogic.com/news/training.html

Onsite courses are delivered at the time of your choosing, in the comfort and convenience of your own facility, and they can be tailored for your specific project requirements and challenges. All onsite training includes laptops preconfigured with the required software.
